

Epredia Glass Slides

Epredia's microscope slides are optically clear, exceptionally flat, and made only from low fluorescence glass. Epredia continues to improve glass slides to provide the highest quality products for the histology lab including optimal images in digital pathology.

Continuous improvement efforts in manufacturing enable Epredia to deliver glass slides with unparalleled flatness and optical clarity. Optimized slides can improve workflow by providing:

- Smaller focus range which increases scanning speed
- Optimal focus on liquid based samples
- Optimal focus for the z-axis

Epredia glass products provide the foundation for reliable digital pathology images in the histology laboratory.

Proprietary color coating process reduces the potential for increased focusing time on digital pathology instrumentation.

High optical glass clarity can increase clinician confidence in the quality of captured images.

Decreased scanning time from optimal focusing can improve laboratory workflow and increase overall laboratory productivity.

Epredia's glass slides are regulated product in certain geographies. Please consult with your local Epredia specialist for details.
